Site Updates

Study done on effect of Propecia on the hairline and frontal hair loss This is a rare jewel! Don't miss it. We have gotten our hands on the clinical study which tested the effectiveness of Propecia on frontal hair counts... This study is very easy to read and very clear in its results and graphs, so I won't go into it too much here, just go to the HairlossTalk Document Resource Center and take a look. This is another study with surprising results...

To view the Frontal Hair Loss Study, follow this link and look in the "Propecia Related" section.
