

# Hair Loss Affecting Your Confidence or Mental Health?

**You're not alone—and your experience can help improve care for others.**

---

Hair loss affects more than appearance—it can impact confidence, identity, and mental health.

We are conducting an IRB-approved research study to better understand the emotional, psychological, and social impact of hair loss conditions including androgenetic alopecia and alopecia areata.

This study combines patient experiences with national EHR data (Epic COSMOS) to improve future care, mental health screening, and support resources.

## ■ Takes less than 5 minutes

- Completely anonymous
- Open to anyone experiencing hair loss
- All types of hair loss and all backgrounds are welcome
- Helps improve future treatments and support systems

## Scan to take the survey
